LaTeXExample

1 Introduction

This document will be used to demonstrate various base functions available in LaTeX.

---

2 Text Formatting

This is italicized text

This is bolded text

This is underlined text

---

3 Math Formatting

Display Style Math Example:

$$f(x) = (x + 2)^2 - 9$$

Align * environment variation:

$$f(x) = (x+2)^2 - 9$$
$$f(1) = (1+2)^2 - 9$$
$$= 9 - 9$$
$$= 0$$

Numbered align* with multiple equations per line:

$$x + 2y = 8 \qquad\qquad x - y = -1 \tag{1}$$
$$x + 2y = 8 \qquad\qquad 2x - 2y = -2 \tag{2}$$

$$x + 2y = 8$$
$$2x - 2y = -2$$
$$3x = 6$$
$$x = 2$$

This is a function of x.

Display Style Equation: $\displaystyle\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$

Inline Equation: $\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$

Auto Scaled brackets: $\left(\sum_{n=0}^{N} \left(\frac{1}{a+b} \right)^2 \right)^2$

Annotated Equation: $n = ab$ where a and b are natural numbers

AMS blackboard font: $\mathbb{Z} \in \{1, 2, 3, 4\}$

4 Code Styling

```cpp
#include <iostream>
using namespace std;

int main() {
    cout << "Hello World!";
    return 0;
}
```

Listing 1: C++ example

5 Images And Tables

Tabular example:

Left	Center	Right
A	B	C

Matrix/Array example:

$$\begin{bmatrix} a_1 & a_2 & a_3 \\ a_4 & a_5 & a_6 \end{bmatrix}$$

This can also be done the AMS way:

$$\begin{pmatrix} a_1 & a_2 & a_3 & \cdots \\ a_4 & a_5 & a_6 & \cdots \end{pmatrix}$$

6 Calculus Notation

Polynomials: $f(x) = a_n x^n + a^{n-1} x^{n-1} + \cdots + a_1 x + a_0$

Exponentials: $c_1 e^{r_1 x} + c_2 e^{r_2 x} + \cdots + c_n e^{r_n x}$

Limits: $\displaystyle \lim_{x \to \infty} \frac{x^2 + 1}{x^2 - 1} = 1$

Summations: $\displaystyle\sum_{\substack{n=0 \\ n \text{ odd}}}^{\infty} a_x x^n$

Integrals: $\displaystyle\int_0^\infty f(x)\,\mathrm{d}x$, $\displaystyle\int_a^b f(x)\,dx = F(x)\Big|_a^b$

Derivatives: $\dfrac{df}{dx}$, $f'(x)$

Partial derivatives: $\dfrac{\partial f}{\partial x}$

Vectors: $\vec{r}(t) = \langle x(t), y(t), z(y) \rangle$

Calc 3 Construct: $\displaystyle\oint \vec{e} \cdot d\vec{s} = \dfrac{d\Phi_B}{dt}$

---

7   Extra Math

Square Root: $\sqrt{x}$, $\sqrt[3]{\dfrac{x}{y}}$

Quadratic Formula: If $ax^2 + bx + c = 0$ then $x = \dfrac{-b \pm \sqrt{b^2 - 4ac}}{2a}$

Set Theory: $\{x \in S \mid P(x)\}$, $\{\forall x \exists a \mid a = x, \therefore x = x\}$

Combinatorics: $\dbinom{n}{k}$, $_nC_k$, $_nP_k$
